Appendix

Usage-based AI exposure across Australia's earnings distribution

Luc Taya, Economics (Honours) graduate, University of Western Australia

2026-10-26

Every table here is read from pipeline output. File paths refer to the project repository. Differences in exposure are in exposure points (exposure × 100); rank gaps are in percentile points. Items added after the first results, including those added after review of the first draft, are labelled.

1 Alternative specifications

The main text uses one specification: weighting scheme 1, all units, EEH weekly earnings. This section reports every alternative, including those that do not hold under the rule in the Methods section.

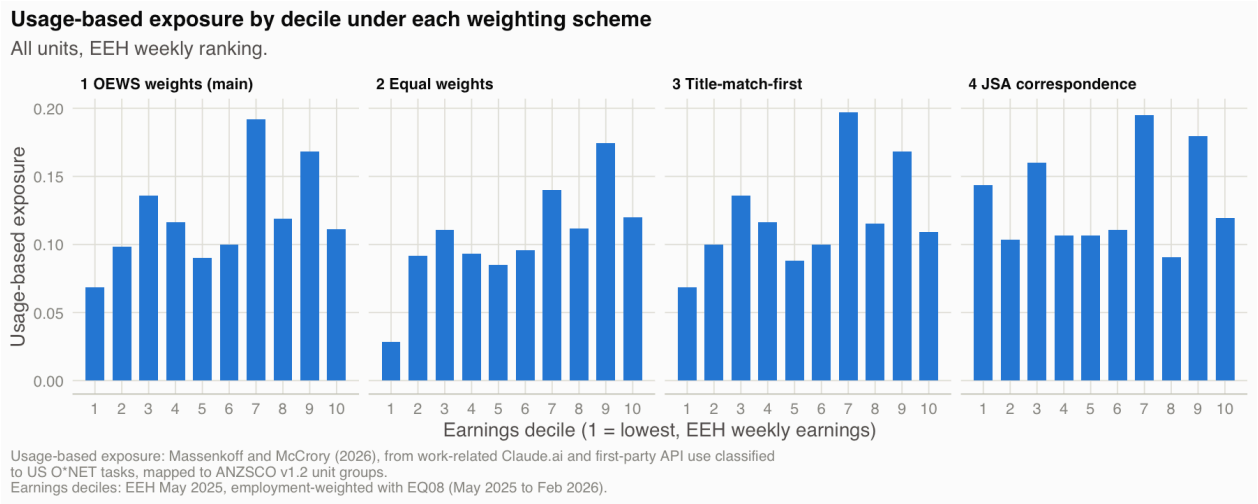

Figure 1: Usage-based exposure by decile under each weighting scheme.

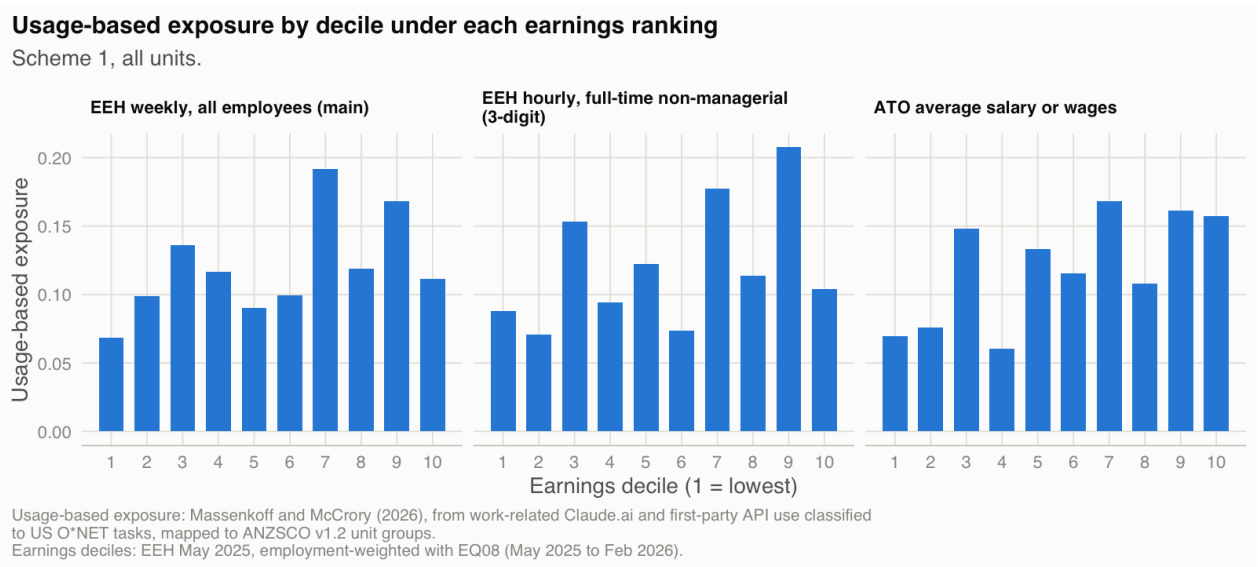

Figure 2: Usage-based exposure by decile under each earnings ranking.

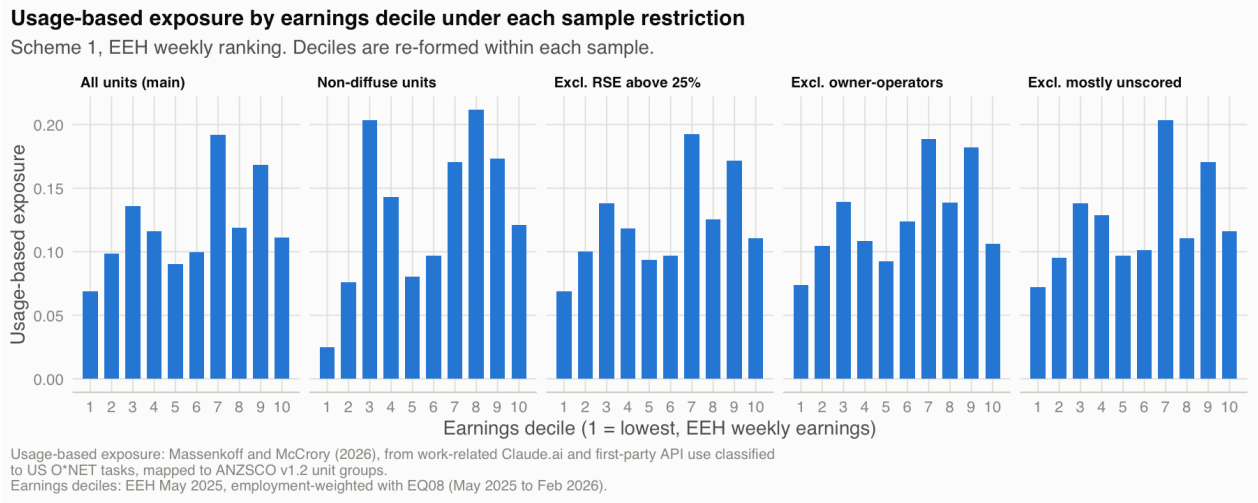

Figure 3: Usage-based exposure by decile under each sample restriction.

2 Sensitivity table

Decile profiles of usage-based exposure under every weighting scheme, sample and earnings ranking. "Holds" applies the rule in the Methods section against the primary specification (scheme 1, all units, EEH weekly earnings): the OLS slope of the decile means (shown, in exposure points per decile) has the main profile's sign, and the Spearman correlation with the main profile is at least 0.7. The concentration index (CI) and the rank index (rank CI, added after the first results) summarise the whole distribution.

Scheme	Sample	Ranking	Decile 1	Decile 10	Top minus bottom	Slope	Spearman with primary	CI	Rank CI	Holds
1 OEWS	All units	EEH weekly	0.069	0.111	4.3	0.62	1.00	0.089	0.073	yes

3 The profile without decile boundaries

Added after review of the first draft. Decile means can exaggerate single-unit spikes, so the profile is also shown as a smoothed curve over earnings percentiles.

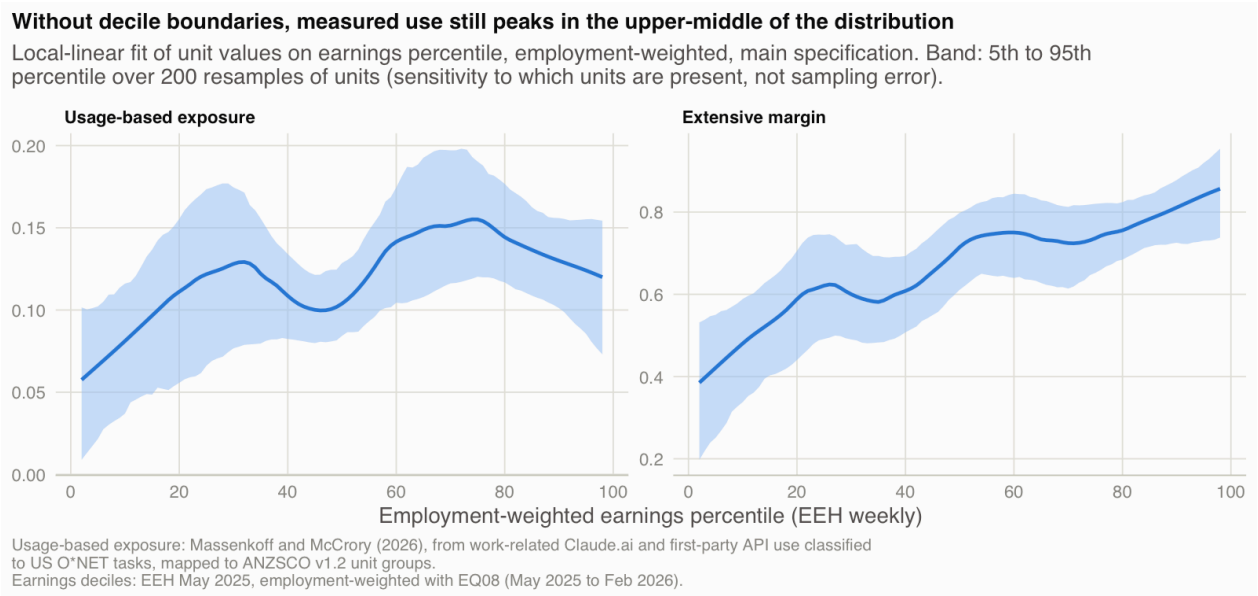

Figure 4: Smoothed profile over earnings percentiles, main specification.

4 Margins, lower bound and capability analogue by decile

Main specification. The log decomposition compares each decile with decile 1: $\ln(e_d/e_1) = \ln(m_d/m_1) + \ln(i_d/i_1)$. The lower bound counts linked US occupations without a score as zero instead of renormalising over scored ones. The capability analogue applies the same weights to an indicator of a positive Eloundou et al. beta. All three were added after review of the first draft.

Decile	Exposure	Lower bound	Extensive margin	Intensity	Share of linked occupations with beta > 0	Extensive share of log difference from decile 1
1	0.069	0.064	0.388	0.177	0.866	
2	0.099	0.094	0.561	0.176	0.864	102%
3	0.136	0.124	0.672	0.202	0.975	80%
4	0.116	0.112	0.555	0.210	0.978	68%
5	0.090	0.082	0.658	0.137	0.970	192%
6	0.100	0.092	0.793	0.126	0.994	192%
7	0.192	0.182	0.695	0.276	0.987	57%
8	0.119	0.105	0.668	0.178	0.983	99%
9	0.168	0.140	0.860	0.196	0.998	89%
10	0.111	0.103	0.814	0.137	0.972	153%

5 Concentration indices for every measure

Main specification. The level index $2\,\mathrm{cov}(e, r)/\bar{e}$ depends on each measure's mean and is not comparable across measures. The rank index $4\,\mathrm{cov}(R_e, r)$ is; without ties it equals one third of the weighted Spearman correlation with earnings. The Erreygers index applies to measures bounded on $[0, 1]$. The generalised index $2\,\mathrm{cov}(e, r)$ is in the measure's own units. AIOE takes negative values, so its level and Erreygers indices are not defined. Rank, Erreygers and generalised indices were added after review of the first draft.

Measure	Level	Rank	Erreygers	Generalised	Employment covered
Usage-based exposure	0.089	0.073	0.043	0.0107	99.1%
Usage-based exposure, lower bound	0.078	0.076	0.034	0.0085	99.1%
Extensive margin	0.097	0.084	0.259	0.0649	99.1%
Share of linked occupations with beta > 0	0.022	0.063	0.083	0.0208	100.0%
JSA automation	0.013	0.035	0.020	0.0049	100.0%
JSA augmentation	0.037	0.147	0.094	0.0236	100.0%
Eloundou beta	0.116	0.137	0.167	0.0418	100.0%
AIOE		0.141		0.2198	100.0%

6 Usage-potential gap: bottom and top quintiles

Mean rank gap (percentile points) in the bottom and top earnings quintiles, all units. AIOE appears only in this aggregate form.

Without zero-exposure units. Added after review of the first draft. All units with zero usage-based exposure share one tied rank, so their gaps are set by the potential measure alone. Here the gaps are recomputed among units with positive exposure, within the same deciles (EEH weekly ranking). Averaging over random tie-breaks would give exactly the mid-rank results above, because the expected rank under random tie-breaking is the mid-rank.

7 Influence of single large units

The top-minus-bottom difference, decile 7 (the peak), and the concentration indices with each of the five largest units in deciles 1, 7 and 10 left out in turn. Deciles are re-formed each time. “Holds” applies the rule against the main profile. This check was added after the first results and extended to decile 7, the indices and the rule after review of the first draft.

Scheme	Left out	From decile	Top minus bottom	Decile 7	CI	Rank CI	Holds
1 OEWS	(none)		4.3	0.192	0.089	0.073	yes

9 Largest rank disagreements with JSA automation

The fifteen units with the largest gap under scheme 1 whose sign is the same under all four schemes. The scheme columns give the gap, in percentile points, under each weighting scheme. A negative gap means usage-based exposure ranks the unit lower than JSA automation does. “Contribution” is the scheme-1 gap times the unit’s share of employment, in percentile points (added after the first results).

Unit	Title	Employment (‘000)	Usage-based exposure	JSA automation	Scheme 1	Scheme 2	Scheme 3	Scheme 4	Contribution
5611	Betting Clerks	1.5	0.007	0.71	−77.1	−70.3	−74.7	−81.7	−0.01

10 Women and men: within and between deciles

Added after review of the first draft. The difference between women's and men's mean usage-based exposure is split into a within-decile part, which weights the decile differences by the average of women's and men's employment shares, and a between-decile part, which weights the difference in shares by the average of the two means. The parts add to the total.

Women minus men	Within deciles	Between deciles	Within share
0.0425	0.0546	−0.0121	128%

11 Western Australia: contributions by major group

WA minus national mean usage-based exposure (× 100), by major group. "Raw" is $\sum_{a \in g}(s_a^{WA} - s_a^{AUS})e_a$, as in the first draft; "relative to the national mean" subtracts the national mean from e_a and does not depend on the level of the measure. Both sum to the same total. The normalised version was added after review of the first draft.

Major group	WA share	National share	Raw	Relative to the national mean
Managers	11.7%	12.8%	−0.20	−0.07
Professionals	25.2%	27.8%	−0.96	−0.64
Technicians and Trades Workers	16.7%	13.6%	0.05	−0.32
Community and Personal Service Workers	10.0%	11.1%	−0.02	0.11
Clerical and Administrative Workers	11.9%	12.6%	−0.23	−0.15
Sales Workers	7.5%	7.6%	−0.02	−0.01
Machinery Operators and Drivers	8.2%	6.2%	0.00	−0.24
Labourers	8.9%	8.4%	0.01	−0.05

Measure	WA	Australia	Difference	Relative difference
Usage-based exposure	0.107	0.120	−0.0137	−11.4%
Extensive margin	0.627	0.667	−0.0406	−6.1%

Measure	WA	Australia	Difference	Relative difference
JSA automation	0.362	0.373	−0.0118	−3.2%
Eloundou beta	0.344	0.360	−0.0165	−4.6%

12 Usage relative to employment: published and rescaled shares

The published SOC major-group shares do not sum to one hundred per cent (see the last tables of this appendix). “Rescaled” divides each geography and month by its published total before taking the ratio to employment. Added after review of the first draft.

Geography	SOC major group	Published	Rescaled

13 Another platform: Copilot-based applicability

Added for v1.0, after the first results. Microsoft's AI applicability score (Tomlinson et al. 2025, CC BY 4.0) is mapped to ANZSCO through the same links and weights as the usage-based score. Measures are compared on employment-weighted ranks. The composite is the mean of each unit's two percentile ranks; with two sources the median equals the mean.

Measure	Units	Rank index	Rank correlation with Claude usage	Rank correlation with earnings
Claude usage-based exposure	355	0.073	1.00	0.22
Copilot AI applicability	355	−0.011	0.65	−0.03

Measure	Units	Rank index	Rank correlation with Claude usage	Rank correlation with earnings
JSA automation	357	0.035	0.72	0.10
JSA augmentation	357	0.147	0.64	0.44
Eloundou beta	357	0.137	0.77	0.41
AIOE	355	0.141	0.79	0.42

Every specification: rank indices on the units with both measures.

14 Uncertainty: design and ranges

Added for v1.0, after the first results.

- **Crosswalk weights.** Each unit's scheme-1 weights p over its n scored US occupations are redrawn from Dirichlet(αnp). The concentration α is chosen from a grid so that the employment-weighted average spread of unit values across draws is closest to their spread across schemes 1 to 3. The wider setting uses $\alpha/4$.
- **Earnings.** Each unit's EEH weekly earnings are multiplied by $1 + \varepsilon$, with ε normal with standard deviation equal to the unit's published relative standard error (the median where none is published), independently across units. Ranks and deciles are re-formed in every draw.
- **Employment** is held fixed. EQ08 publishes no standard errors.
- **Draws.** 500 per setting, with a fixed seed, so reruns give identical results.

alpha	Spread across draws	Spread across schemes 1-3	Chosen
0.25	0.0269	0.0179	
0.50	0.0215	0.0179	
1.00	0.0165	0.0179	yes
2.00	0.0124	0.0179	
4.00	0.0090	0.0179	
8.00	0.0065	0.0179	
16.00	0.0046	0.0179	

Ranges over draws (5th, 50th and 95th percentiles).

Draws	Top minus bottom	CI	Rank CI
Crosswalk	1.3 / 4.3 / 7.4	0.065 / 0.090 / 0.115	0.060 / 0.070 / 0.083
Crosswalk, wider	−0.6 / 4.6 / 9.2	0.047 / 0.092 / 0.133	0.052 / 0.070 / 0.096
Earnings	2.5 / 3.7 / 4.7	0.080 / 0.089 / 0.100	0.067 / 0.073 / 0.080
Both	0.6 / 3.8 / 7.0	0.062 / 0.090 / 0.117	0.059 / 0.071 / 0.085

Bounds for unscored links. Lower: unscored US occupations count as zero. Upper: they count as one, the highest possible score. The high imputation gives them the highest score in their SOC minor group (major group if the minor group has none); it is not a bound, because for some units that score is below the mean of their scored links.

Version	Top minus bottom	CI	Rank CI	Peak decile	Holds under the rule
Lower bound (zero)	3.9	0.078	0.076	7	yes
Main (renormalised)	4.3	0.089	0.073	7	yes
High imputation	8.4	0.127	0.087	7	yes
Upper bound (one)	10.0	0.010	0.041	3	yes

Largest disagreements. Share of draws in which each of the fifteen largest sign-stable disagreements with JSA automation stays among the fifteen largest.

Unit	Title	Crosswalk	Both
5611	Betting Clerks	100%	100%
5912	Transport and Despatch Clerks	92%	93%
5911	Purchasing and Supply Logistics Clerks	96%	95%
1411	Cafe and Restaurant Managers	100%	100%
8991	Caretakers	100%	100%
5521	Bank Workers	100%	100%
1211	Aquaculture Farmers	100%	100%
7321	Delivery Drivers	90%	89%
2113	Photographers	97%	98%
7312	Bus and Coach Drivers	100%	100%
3422	Electrical Distribution Trades Workers	77%	79%
1334	Manufacturers	48%	46%
7313	Train and Tram Drivers	84%	85%
5513	Payroll Clerks	89%	86%
2114	Visual Arts and Crafts Professionals	38%	38%

15 Earnings, capability and computer work: full results

Added for v1.0, after the first results. Employment-weighted least squares on employment-weighted percentile ranks (0 to 100), HC1 standard errors, 352 units with every measure. Teleworkability is the classification by Dingel and Neiman (2020) of O*NET-SOC occupations, averaged to SOC 2010 codes and mapped to units through the SOC 2010 links and US employment weights used for AIOE. Its licence is a software licence (GPL-3.0), so no unit-level values are published.

Outcome	Controls	Term	Estimate	SE

Extensive margin	AIOE, teleworkability	Teleworkability	0.062	0.096

Gelbach decomposition. The change in the earnings slope when a potential measure and teleworkability are added, split between them (Gelbach 2016). The two parts add to the change.

Outcome	Potential measure	Slope without controls	Slope with controls	Through the potential measure	Through teleworkability
Usage-based exposure	JSA automation	0.222	0.075	0.056	0.091
Usage-based exposure	JSA augmentation	0.222	−0.112	0.198	0.135
Usage-based exposure	Eloundou beta	0.222	−0.126	0.282	0.066
Usage-based exposure	AIOE	0.222	−0.142	0.360	0.004

Outcome	Potential measure	Slope without controls	Slope with controls	Through the potential measure	Through teleworkability
Extensive margin	JSA automation	0.256	0.099	0.028	0.128
Extensive margin	JSA augmentation	0.256	−0.030	0.158	0.127
Extensive margin	Eloundou beta	0.256	−0.031	0.203	0.083
Extensive margin	AIOE	0.256	−0.054	0.288	0.021

Two measures of capability. JSA augmentation and AIOE treated as two error-prone measures of one capability; the two regressions are stacked and each measure is instrumented with the other (Gillen, Snowberg and Yariv 2019). Both regressions hold teleworkability fixed.

Outcome	Earnings	Capability	Teleworkability
Usage-based exposure	−0.268	1.040	0.085
Extensive margin	−0.154	0.832	0.122

16 Review of the forty largest units

Automated checks on the forty largest units (decision D10 in the decision log, carried out by Claude Code and reviewed by the author). The full table, with a resolution and reason for each flag, is `data/out/m2/top40_units_review.csv`.

Check	Units flagged
unmatched	1
zero	4
diffuse	10
scheme_range	9
influence	6
artefact	3
unscored	2
title	11

Unit	Title	Usage, scheme 1	Flags	Note
6211	Sales Assistants (General)	0.132	diffuse; scheme_range; influence; artefact; title	Retail Salespersons (a flagged artefact, 0.32) and Fast Food and Counter Workers (0.00) carry four-fifths of the weight; partial ISCO links in the ABS correspondence add small weights on beauty, teller and postal occupations. Largest single influence on the main profile; leave-one-out result reported.
2544	Registered Nurses	0.062	influence	
4231	Aged and Disabled Carers	0.042	unscored; title	The main US counterparts (Home Health Aides, Personal Care Aides) have no score, so the value rests on two supervisor occupations. Excluded in the unscored-majority sensitivity run.

Unit	Title	Usage, scheme 1	Flags	Note
5311	General Clerks	0.446	scheme_range; influence	
1421	Retail Managers	0.127	scheme_range	
2211	Accountants	0.329	scheme_range	
2613	Software and Applications Programmers	0.331	diffuse; scheme_range; influence	
3411	Electricians	0.037	diffuse	
7331	Truck Drivers	0.000	zero	
4211	Child Carers	0.021	title	Title flag is wording only (child carer / childcare worker); the link is the natural US counterpart.
5421	Receptionists	0.350	diffuse	
7411	Storepersons	0.002	diffuse; title	Title flag is wording only; US stockers and hand material movers are the natural counterparts.
1311	Advertising, Public Relations and Sales Managers	0.155	scheme_range; influence	
5111	Contract, Program and Project Administrators	0.177	diffuse; scheme_range; title	Closest US occupation (Project Management Specialists) has no score; value rests on business and financial specialist occupations (38% of linked US employment unscored).
8513	Kitchenhands	0.000	zero; title	Title flag is wording only; US food preparation workers are the natural counterpart.
5511	Accounting Clerks	0.284	influence	
4315	Waiters	0.000	zero	
4221	Education Aides	no score	unmatched; unscored	
3513	Chefs	0.048	title	Both links come from ISCO 3434; OEWS weights favour the larger US supervisor occupation over Chefs and Head Cooks.
3232	Metal Fitters and Machinists	0.027	diffuse	
4311	Bar Attendants and Baristas	0.000	zero; artefact; title	Single link to US Bartenders, a flagged artefact with a score of zero.
3212	Motor Mechanics	0.032	diffuse	
4233	Nursing Support and Personal Care Workers	0.009	diffuse	
2713	Solicitors	0.167	artefact; title	Title flag is wording only (solicitor / lawyer); US Lawyers is a flagged artefact.
2251	Advertising and Marketing Professionals	0.628	scheme_range	
1323	Human Resource Managers	0.062	scheme_range	

Unit	Title	Usage, scheme 1	Flags	Note
2531	General Practitioners and Resident Medical Officers	0.037	diffuse; title	Title flag is wording only; US physician occupations, including family medicine, are the counterparts.
5512	Bookkeepers	0.284	title	Title flag is wording only (bookkeeper / bookkeeping clerk).

17 Global automation share by decile

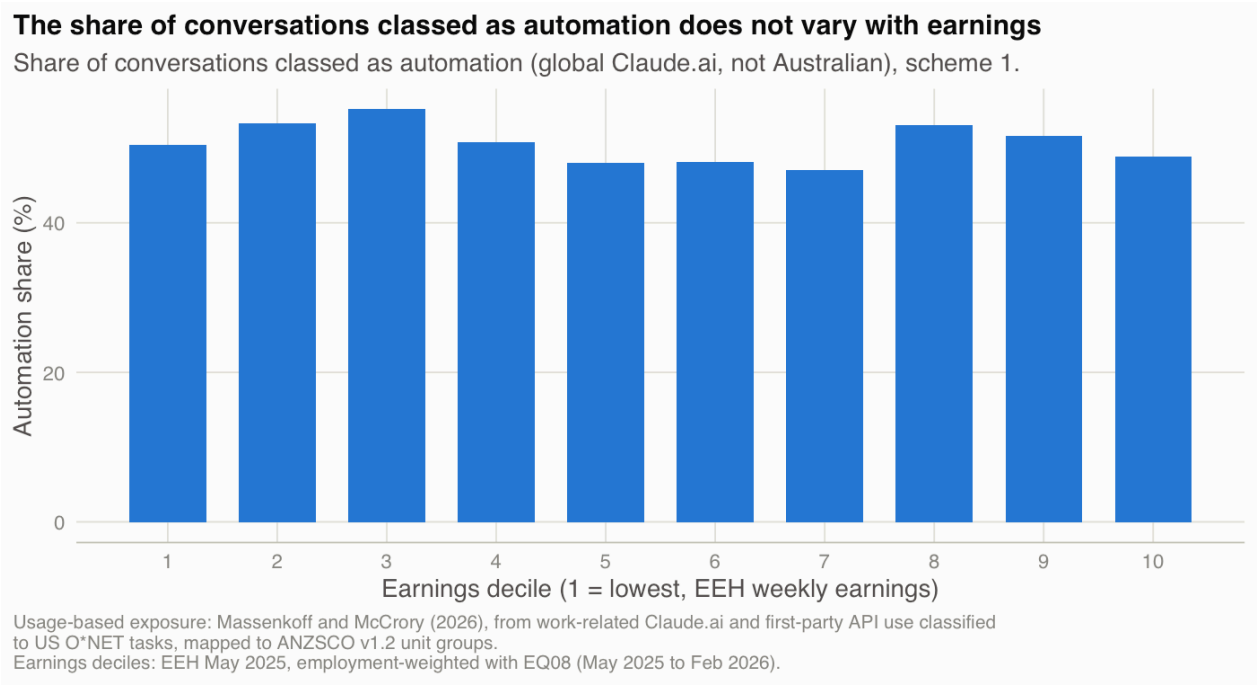

Figure 5: Share of global Claude.ai conversations classed as automation, averaged by earnings decile (scheme 1). These shares are global, not Australian.

18 Rebuilding the usage-based score from task data

The published occupation scores were rebuilt from the published task-level values, using O*NET task weights in place of the time fractions Massenkoff and McCrory use, which are not published. The rank correlation with the published scores falls short of the 0.9 target. The correlation among occupations with a positive published score (added after the first results) shows how much of the agreement comes from matching zeros. The main analysis uses the published scores.

Task weights	SOC codes compared	Spearman	Agreement on exact zeros	Positive scores	Spearman, positive scores	Meets target
equal	756	0.871	93%	345	0.816	no
importance	748	0.869	93%	342	0.827	no
importance × relevance	748	0.870	93%	342	0.840	no

19 The two-capital model: premium and benchmark responses

The main text states the responses of the skill premium to ICT, machinery and AI capital. With competitive wages, the skill premium in the thesis's model is

$$\pi = c_\pi \left(\frac{V}{X}\right)^{1/\sigma_{VX}} \left(\frac{X}{S}\right)^{1/\sigma_{XS}} \left(\frac{U}{V}\right)^{1/\sigma_{VU}} \frac{A^S}{A^U},$$

with $s_I = (1-\mu)(K^I)^{\eta_X}/X^{\eta_X}$ ICT's cost share in the skilled branch, $s_S = 1 - s_I$, and s_M and $s_U = 1 - s_M$ defined likewise in the unskilled branch. Differentiating $\ln \pi$ with respect to $\ln K^I$ and $\ln K^M$ gives the benchmark responses in the main text; substituting $K^I + \zeta K^A$ for K^I (scenario C) or $A^S N^S + \psi K^A$ for S (scenario D) and applying the chain rule gives the two AI responses. If AI instead performs unskilled tasks, $U \to A^U N^U + \psi K^A$, then

$$\frac{\partial \ln \pi}{\partial \ln K^A} = \frac{\psi K^A}{U}\left[\frac{s_U}{\sigma_{VX}} + \frac{1 - s_U}{\sigma_{VU}}\right] > 0.$$

Every expression is checked symbolically and numerically in `theory/check_theory.py`, with output in `theory/check_theory_output.txt`. The responses hold technology fixed; how directed technical change would respond to AI is not derived.

20 Data sources and licences

Commit hashes are shortened to twelve characters; `data/raw/MANIFEST.csv` gives them in full, with each file's URL and checksum.

8434	8419	Other Farm, Forestry and Garden Workers	1	merge (several 2022 units into one v1.2 unit)
8439	8419	Other Farm, Forestry and Garden Workers	3	merge (several 2022 units into one v1.2 unit)

22 Earnings imputations

Units without a published EEH value after bridging, and the parent level used. “none” means the unit has a published value in that source; “not imputed” means it has none and none was imputed (EEH cube 13 covers non-managerial employees only, so the chief executive, general manager and legislator units drop out of the hourly ranking).

Unit	Title	EEH weekly	EEH cube 13 hourly	ATO
1111	Chief Executives and Managing Directors	none	not imputed	none
1112	General Managers	none	not imputed	none
1113	Legislators	minor group (3-digit) mean	not imputed	none
1211	Aquaculture Farmers	minor group (3-digit) mean	none	none
1212	Crop Farmers	minor group (3-digit) mean	none	none
1214	Mixed Crop and Livestock Farmers	minor group (3-digit) mean	none	none
1392	Senior Non-commissioned Defence Force Members	minor group (3-digit) mean	none	none
2522	Complementary Health Therapists	minor group (3-digit) mean	none	none
3221	Metal Casting, Forging and Finishing Trades Workers	minor group (3-digit) mean	none	none
3612	Shearers	minor group (3-digit) mean	none	none
3931	Canvas and Leather Goods Makers	minor group (3-digit) mean	none	none

Unit	Title	EEH weekly	EEH cube 13 hourly	ATO
3994	Jewellers	minor group (3-digit) mean	none	none
3996	Signwriters	minor group (3-digit) mean	none	none
4411	Defence Force Members - Other Ranks	minor group (3-digit) mean	none	none
4513	Funeral Workers	minor group (3-digit) mean	none	none
4515	Personal Care Consultants	minor group (3-digit) mean	none	none
5614	Mail Sorters	minor group (3-digit) mean	none	none
6111	Auctioneers, and Stock and Station Agents	minor group (3-digit) mean	none	none
6217	Street Vendors and Related Salespersons	minor group (3-digit) mean	none	none
6399	Other Sales Support Workers	none	none	minor group (3-digit) mean
8411	Aquaculture Workers	minor group (3-digit) mean	none	none
8413	Forestry and Logging Workers	minor group (3-digit) mean	none	none

23 Units without usage-based exposure

Unit	Title	Employment ('000)	Share of employment
4221	Education Aides	132.5	0.90%
6392	Retail and Wool Buyers	6.1	0.04%
1392	Senior Non-commissioned Defence Force Members	0.3	0.00%

24 Primary chain against the 2022-path chain

Units whose linked US occupations differ between the two chains.

Unit	Title	Primary links	2022-path links	Jaccard	Only in primary	Only in 2022 path
1212	Crop Farmers	5	6	0.83		45-2021
2254	Technical Sales Representatives	2	14	0.14		19-1011; 19-1012; 19-1013; 19-1021; 19-1022; 19-1023; 19-1029; 19-1041; 19-1042; 19-1099; 19-1032; 25-9021
2341	Agricultural and Forestry Scientists	3	14	0.21		19-1011; 19-1012; 19-1021; 19-1022; 19-1023; 19-1029; 19-1041; 19-1042; 19-1099; 41-1012; 41-4011
2345	Life Scientists	10	14	0.71		19-1032; 25-9021; 41-1012; 41-4011
3321	Floor Finishers	4	7	0.57		47-2051; 47-2053; 47-4091
4111	Ambulance Officers and Paramedics	10	11	0.91		29-1071

8419	Other Farm, Forestry and Garden Workers	5	6	0.83		53-7062

25 US employment weights not taken directly from OEWS

SOC	Title	Weight	Source
13-1021	Buyers and Purchasing Agents, Farm Products	163,810	OEWS broad group 13-1020 residual, split equally
13-1022	Wholesale and Retail Buyers, Except Farm Products	163,810	OEWS broad group 13-1020 residual, split equally
13-1023	Purchasing Agents, Except Wholesale, Retail, and Farm Products	163,810	OEWS broad group 13-1020 residual, split equally
13-2022	Appraisers of Personal and Business Property	28,535	OEWS broad group 13-2020 residual, split equally
13-2023	Appraisers and Assessors of Real Estate	28,535	OEWS broad group 13-2020 residual, split equally
21-1011	Substance Abuse and Behavioral Disorder Counselors	245,965	OEWS broad group 21-1010 residual, split equally
21-1014	Mental Health Counselors	245,965	OEWS broad group 21-1010 residual, split equally
25-2055	Special Education Teachers, Kindergarten	130,430	OEWS broad group 25-2050 residual, split equally
25-2056	Special Education Teachers, Elementary School	130,430	OEWS broad group 25-2050 residual, split equally
25-9042	Teaching Assistants, Preschool, Elementary, Middle, and Secondary School, Except Special Education	473,450	OEWS broad group 25-9040 residual, split equally
25-9043	Teaching Assistants, Special Education	473,450	OEWS broad group 25-9040 residual, split equally
25-9049	Teaching Assistants, All Other	473,450	OEWS broad group 25-9040 residual, split equally
29-2011	Medical and Clinical Laboratory Technologists	166,470	OEWS broad group 29-2010 residual, split equally
29-2012	Medical and Clinical Laboratory Technicians	166,470	OEWS broad group 29-2010 residual, split equally
31-1121	Home Health Aides	2,152,905	OEWS broad group 31-1120 residual, split equally
31-1122	Personal Care Aides	2,152,905	OEWS broad group 31-1120 residual, split equally
39-7011	Tour Guides and Escorts	26,750	OEWS broad group 39-7010 residual, split equally
39-7012	Travel Guides	26,750	OEWS broad group 39-7010 residual, split equally
47-4091	Segmental Pavers	14,190	OEWS broad group 47-4090 residual, split equally
47-4099	Construction and Related Workers, All Other	14,190	OEWS broad group 47-4090 residual, split equally
51-2022	Electrical and Electronic Equipment Assemblers	123,485	OEWS broad group 51-2020 residual, split equally
51-2023	Electromechanical Equipment Assemblers	123,485	OEWS broad group 51-2020 residual, split equally
51-2092	Team Assemblers	702,515	OEWS broad group 51-2090 residual, split equally
51-2099	Assemblers and Fabricators, All Other	702,515	OEWS broad group 51-2090 residual, split equally
53-1042	First-Line Supervisors of Helpers, Laborers, and Material Movers, Hand	155,910	OEWS broad group 53-1040 residual, split equally
53-1043	First-Line Supervisors of Material-Moving Machine and Vehicle Operators	155,910	OEWS broad group 53-1040 residual, split equally
53-1044	First-Line Supervisors of Passenger Attendants	155,910	OEWS broad group 53-1040 residual, split equally
53-1049	First-Line Supervisors of Transportation Workers, All Other	155,910	OEWS broad group 53-1040 residual, split equally
11-1031	Legislators	5,030	no OEWS row; smallest published detailed employment in its SOC major group
45-3031	Fishing and Hunting Workers	1,330	no OEWS row; smallest published detailed employment in its SOC major group

US military occupations (SOC major group 55) have no OEWS employment and no usage-based exposure, so they carry no weight.
